Outline

- Collaborative Research
- Research Data Management
- data.depositar.io
 - Retooling an open data repository for a research data repository
 - Show Case: Place Names & Historical Maps
 - Show Case: Roadkill Observations
- Openness and FAIR Data

Collaborative Research

- Collaboration is the process of two or more people or organizations working together to realize or achieve something successfully.
 - Wikipedia

- For collaborative research, we set to make
 - the research project and
 - the research data
 - open to project members and even to others.

Openness Benefits Research

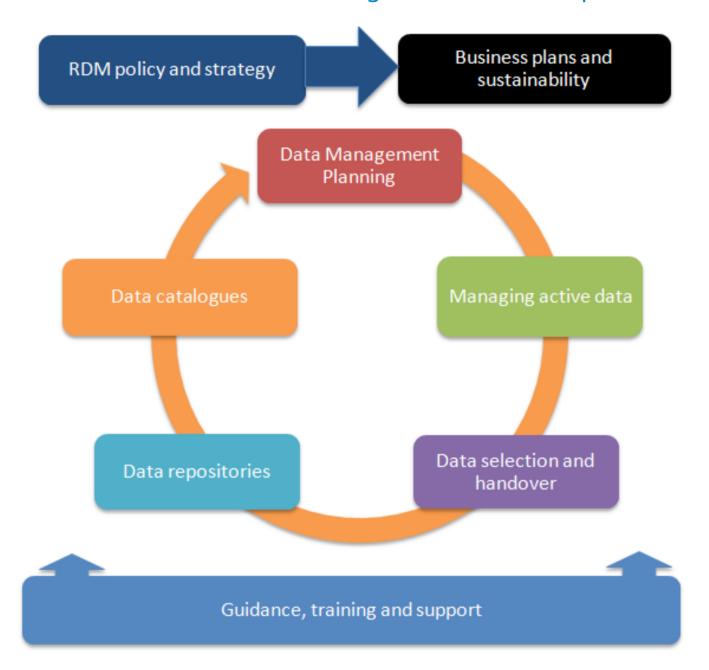

Help disseminate research findings.

 Help reproduce and re-purpose research results.

Help encourage research collaborations.

Research Data Management (RDM)

http://www.dcc.ac.uk/resources/how-guides/how-develop-rdm-services

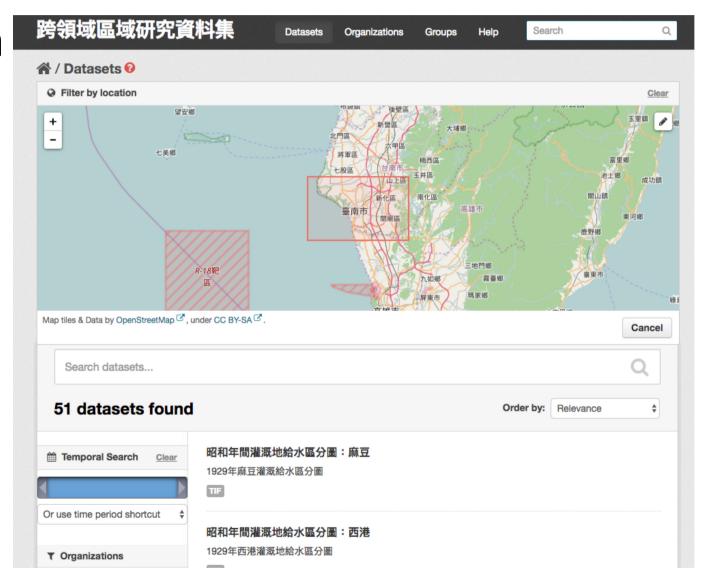

A Research Data Repository

- data.depositar.io
- Originally built for interdisciplary regional study
 - A collaboration between Academia Sinica (Institue of Information Science and Center for GIS) and National Cheng Kung University
- Built upon CKAN
 - CKAN: software from OKI for "open data"
 - Adapt and extend CKAN for research data deposit, publishing, and reuse
 - Hosted at Academia Sinica

Search and Data Discovery

- free-text search
- multiple filters
- spatial and temporal constraints

Time Period Shortcut:	Not Specified	▼	This shortcut provides some historical period for filling temporal information of the dataset.
Temporal Resolution:		\$	
Start Time:			Depend on the tempor resolution setting. Acceptable formats: 'YYYY', 'YYYY-MM', or 'YYYY-MM-DD'.
End Time:			Depend on the tempor resolution setting. Acceptable formats: 'YYYY', 'YYYY-MM', or 'YYYY-MM-DD'.

Generalized and Multilingual Metadata

- One set of simple metadata for all datasets; three categories:
 - Basic metadata: title, description, data type, ...
 - Descriptive metadata: language, temporal, and spatial information, keywords, ...
 - Management metadata: license, author, created time, organization, maintainer, ...

Wikidata-powered Keywords

- Keywords
 - controlled vocabularies for tagging datasets
- Define your own list(s) of keywords
 - a never-ending process ...
- Use Wikidata as the source for keywords
 - 37M+ entries
 - multilingual

- semantic relations enable data inference
 - e.g. Tainan is part of Taiwan

Wikidata Entries for Keywords

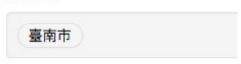

Search and select keywords:

Keywords (as Wikidata IDs) are stored.

Openness Benefits Research

Help disseminate research findings.

 Help reproduce and re-purpose research results.

Help encourage research collaborations.

Openness

- Libre
 - can be used by people
- Digital
 - can be used by machines and put online
- Raw
 - can be modified and re-purposed
- Common (format & vocabulary)
 - can be exchanged and interlinked
- Transparent
 - (the process) can be fixed; meta-level

FAIR Data

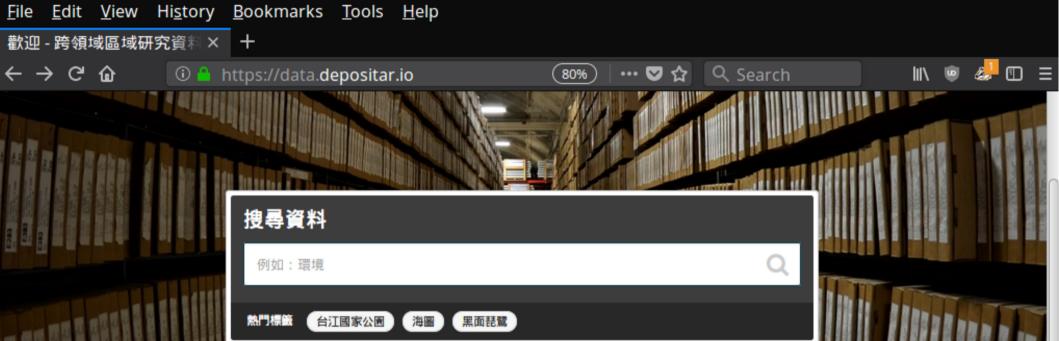

https://www.force11.org/group/fairgroup/fairprinciples

- **Findable:** Have sufficiently rich metadata and a unique and persistent identifier.
- Accessible: Retrievable by humans and machines through a standard protocol; open and free by default; authentication and authorization where necessary.
- Interoperable: Metadata use a "formal, accessible, shared, and broadly applicable language for knowledge representation".
- Reusable: Metadata provide rich and accurate information; clear usage license; detailed provenance.

A Work In Progress

- User manual (Chinese and English languages)
- Interopable base map services when previewing spatial datasets

- Outreach
 - to researchers who have been curating datsets
 - to students, by being part of teaching in classes
- Research Data Management Workshop
 - currently planned in 2018 Winter
