

# Issues of Platforms & ToS

- Platforms change their ToS all the time
- ToS compete with public licenses
- Issues
  - Platforms want users to license them separately
  - They offer a limited set of public licenses (if any)
  - They can make attribution difficult (Where are the permanent links? What if one is uploading for others?)
  - They can require registration before one can download
  - They can convert files; they may hide the originals
- Self/Communal hosting with FLOSS packages
  - Use e.g. GNU Media Goblin for sharing photos
